SUMMARY

I'm a Software Developer with a Robotics & Automation Engineering background. I build end to end from early user conversations through architecture, deployment, and measurement with a focus on clean systems that developers enjoy working in. My next step is to bring that same approach to larger-scale products, working alongside experienced engineers to build things that matter at scale.

EDUCATION

King Mongkut's University of Technology Thonburi GPA 3.29 Graduated June 2023
Bachelor of Engineering in Robotic and Automation (FIBO)

EXPERIENCE

Fin Insurance Broker Co., Ltd. Apr 2025 - Apr 2026
Full Stack Developer

- Built an internal HRIS/ERP covering personal data, KPI evaluations, attendance, leave/OT, and recruitment for 200+ employees, reducing manual documentation and human error.
- Digitized an expense reimbursement and advance payment system with Lark-based approval workflows, eliminating paper processes and reducing accounting processing time.
- Built an email classification system combining ML and rule-based methods to automatically identify and flag problematic insurance cases, achieving 80%+ accuracy and enabling agents to prioritize issues before manual review.
- Developed an insurance renewal platform with automated email and SMS reminders, call tracking for agent follow-ups, and KPI dashboards for call activity and premium collection.
- Built an internal back-office system for the logistics team to manage orders, packing, and delivery, including product setup, stock entry, and real-time inventory tracking.
- Developed an internal asset management module to track and manage organizational assets across departments.
- Built an e-learning platform for internal training and licensing exam preparation for Non-Life and Life insurance certifications.

Freelance Developer Jan 2024 - Feb 2025
Software Developer

- Designed frontend for an AI-powered conversational LLM app using for real-time information retrieval deployed with Chainlit as the interface layer.
- Developed a web-based learning platform ("Smart Factory") with intuitive UI and training resources for end-user onboarding.
- Built a hospital porter tracking system (mobile & web) improving real-time staff position and operational workflow.
- Created a food sterilization monitoring system with PLC-based temperature/pressure controls and an online real-time dashboard.
- Built an IoT dashboard to collect and visualize machine/robot sensor data during production, laying groundwork for predictive maintenance.

TECHNICAL SKILLS

- **Frontend:** React.js, Next.js, Ant Design, TanStack Query, Vitest
- **Backend:** Node.js, Python, Go, REST APIs, microservices, API Routines
- **Databases:** MySQL, SQL Server, PostgreSQL, MongoDB, Redis
- **IoT & Embedded:** PLC, STM32, MQTT, WebSocket, RabbitMQ, WebRTC (P2P)
- **AI / LLM:** AI Integration, Prompt Engineer, RAG pipelines
- **DevOps & Tool:** Docker, AWS, GitLab, CI/CD, Apidog
